### WORK EXPERIENCE

#### FRONTEND DEVELOPER - TEAM LEAD

#### CorefinExpert.pvt.ltd

Pune, India

- Created responsive and dynamic websites using **React.js**, leveraging its component-based architecture for modular and reusable code.
- Designed user-friendly apps and websites, creating wireframes and prototypes using figma.
- Led design teams, managed projects, and mentored junior staff.
- Developed and customized sites, focusing on responsive design and optimization.
- Ensured website responsiveness and cross-browser compatibility through modern CSS techniques and libraries like **Tailwind CSS** and **Bootstrap**..
- Optimized performance by using techniques like **lazy loading** and **code splitting** in React applications.

PROJECTS

Sports Management System

Description:

This project is a comprehensive **Sports Management System** developed using **Spring Boot** for backend and **React.js** for frontend. It provides a platform for managing local tournaments efficiently. Key features of the system include:

- User Registration and Login:**  
Implemented a robust login system with session management to ensure secure and personalized user access.
- Tournament Registration:**  
Facilitates the registration of local tournaments, allowing users to enter tournament details, schedules, and participant information seamlessly.
- Database Integration:**  
Utilized **MySQL** for efficient data storage and retrieval, ensuring a reliable and scalable database structure to manage users, tournaments, and related data.
- Spring Boot Backend:**  
Designed RESTful APIs to handle all backend operations, including user authentication, tournament management, and data processing.
- React.js Frontend:**  
Created an interactive and responsive user interface to provide a smooth and user-friendly experience for accessing tournament details and other features.
- ResponsiveDesign:**  
The application is optimized for various devices, ensuring accessibility on desktops, tablets, and mobile phones.

A Flight Booking Web application:-

Description:-

- I spearheaded the development of a flight booking web application, utilizing HTML and CSS for the frontend, and Java for backend functionalities.
- Employing JDBC, I seamlessly connected the Java application to the database.
- User input was facilitated through JSP, enhancing user experience with HTML/CSS and managing HTTP.
- Sessions efficiently. Servlets were employed to store user data and implement.
- login/register functionality, while also adding cookies to the application.
- Leveraging Servlet filters, I ensured robust password validation. This project showcases my adeptness in full-stack development, database integration, session management, and security measures, encapsulated.
